

SUDDEN CARDIAC ARREST:

the leading cause of unnatural death in football¹

Sudden cardiac arrest (SCA) can strike at any time.

It happens in a split second. A player collapses from SCA and the clock starts ticking in the race to restore a normal heart rhythm. Prompt initiation of CPR with early defibrillation can save countless victims' lives.

ZOLL® automated external defibrillators (AEDs) empower rescuers by delivering a defibrillating shock and unparalleled technology that provides rescuers with real-time, integrated CPR feedback for both rate and depth of compressions.

The Facts

350,000

patients are affected by out-of-hospital cardiac arrests each year in Europe¹

10%

Decrease in survival for every minute of delayed defibrillation²

5%

Chance of survival if a victim collapses and nothing is done until emergency services arrive³

Make ZOLL AEDs a part of your emergency plan
